Introduction

In today's digital world, digital literacy skills are required to effectively use online tools, communicate professionally, and to stay safe on the internet. The goal of this project was to create a Digital Literacy Portfolio that demonstrates practical digital skills and awareness.

Digital Literacy Infographic

For Task 1, I created a Digital Literacy Awareness infographic using Canva. The infographic was designed to help students understand the importance of digital literacy and online behaviour. It included sections such as what digital literacy is, usefullness, safe internet practices, professional online behaviour and email etiquette.

Student Digital Portfolio

For Task 2, I created and updated my professional profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used by students, and professionals to showcase and develop skills, as well as to connect with others.

Coding Platforms

For Task 3, I explored coding practice and completed some Python coding challenge using Hackerrank. In addition to this, I created a Digital Literacy Awareness Quiz using Google Forms.

Email Etiquette

For Task 4, I created two professional emails and a social media do's and don'ts checklist. The first email was written to a professor requesting an extension and the second email was written to an internship coordinator expressing interest in a summer internship opportunity.

Cybercrime Awareness

For Task 5, I researched cybercrime with a focus on UPI payment fraud. While researching, I learned how attackers trick users using phishing links. Therefore I drafted a prevention checklist to avoid digital frauds and reduce cyber crime.

Conclusion

This project helped me develop essential digital literacy skills such as creating professional online presence, practicing safe internet usage and communicating effectively through digital platforms.
